

Frailty in Clocktower Local Care Network

# Clocktower Local Care Network is comprised of five wards in the Northwest & Central parts of the borough

Bexley Wellbeing Partnership (BWP) brings together 17 local partner organisations with a shared goal of supporting and improving the health, care and wellbeing of local people and communities. The BWP is divided geographically into three Local Care Networks (LCNs): North Bexley, Clocktower, and Frognal.

Clocktower Local Care Network comprises the electoral wards:

- East Wickham
- Falconwood & Welling
- West Heath
- Crook Log
- Bexleyheath

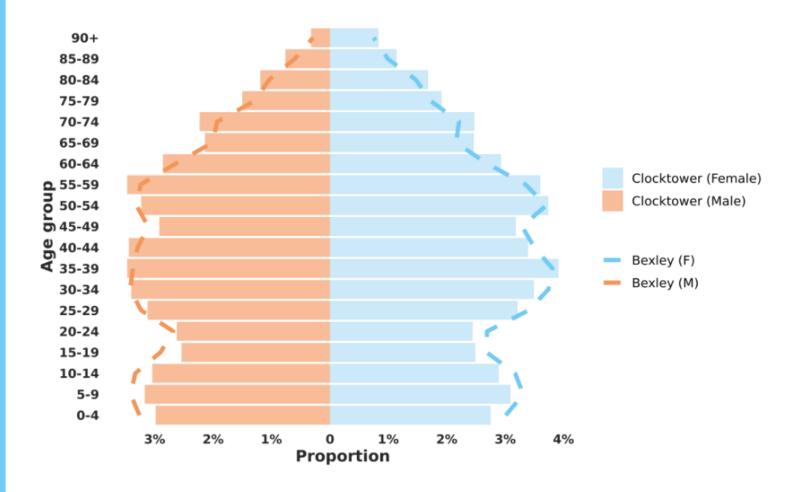

### Clocktower has a similar age profile to Bexley as a whole

Age is the strongest risk factor for frailty, and Clocktower has a higher proportion of residents aged 85+ than the England average.

Clocktower has less young adults aged 16-24 than the London and England average.

Source: ONS SAPE23DT2, 2021

### There are inequalities in income deprivation in Clocktower

Deprivation is another predictor of frailty, and within Clocktower there are inequalities.

The Income Deprivation Affecting Older People Index (IDAOPI) measures the proportion of all those aged 60 or over who experience income deprivation.

Whilst Clocktower on average has a lower proportion than the England and Bexley averages, there is variation at ward level, with East Wickham experiencing a higher level than the Bexley average.

### There is a cluster of older people living alone in Clocktower

Loneliness is strongly associated with an increased frailty trajectory.

In Clocktower there is a cluster of older people age 66+ living alone, in Bexleyheath and parts of West Heath The cluster is visible as the dark blue neighbourhoods on the map:

## Clocktower is estimated to have the second highest prevalence of frailty in Bexley

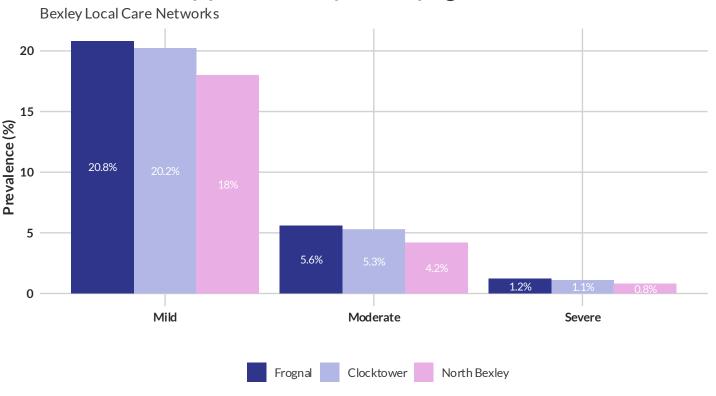

By applying robust research<sup>1</sup> based prevalence estimates to the age and sex structure of the Bexley population, it is possible to estimate the overall prevalence of frailty in each local care network.

Clocktower is estimated to have the second highest prevalence of frailty in residents aged 50+ in all severity categories:

- Over 1 in 5 residents 50+ with mild frailty
- Over 1 in 20 residents 50+ with moderate frailty
- Over 1 in 100 residents 50+ with severe frailty

### Estimated frailty prevalence by severity, age 50+

The rate of emergency admissions for falls in Clocktower corroborates with lower levels of deprivation and estimated levels of frailty

In 2023/24 Clocktower had the lowest rates of emergency admissions for falls in the borough, although Bexleyheath has a higher rate of any ward in this area.

Rate of emergency hospital admissions for falls in ages 65+ (per 100 population) by LCN & Ward, 2023/24
